$$f_{\theta}(x) = \frac{3x^2}{\theta^3} \mathbf{1} \{ 0 \leqslant x \leqslant \theta \}, \qquad \theta > 0.$$

Diseñar un test de hipótesis de nivel 0.1 para testear la hipótesis de que la media de X es mayor que 1.2 basado en una muestra de X de tamaño 1. Graficar la función de potencia del test.

de potencia del test.

$$E[X] = \int_{0}^{\infty} x \frac{3x^{2}}{\theta^{3}} dx = \frac{3}{\theta^{3}} \frac{x^{4}}{4} \Big|_{0}^{0} = \frac{3}{4} \theta$$

$$H_{0}: \frac{3}{4}\theta \leq \frac{12}{10} \qquad H_{0}: \theta \leq \frac{8}{5}$$

$$H_{0}: \theta \leq \frac{8}{5} \qquad H_{1}: \theta \geq \frac{8}{5}$$

$$O \leq x \leq \theta \qquad \Rightarrow y = \frac{x}{\theta} \qquad \text{de time VA} \qquad f_{y}(x) = \frac{f_{x}[x]}{|q^{x}[x]|} \Big|_{x=\theta}$$

$$O \leq \frac{x}{\theta} \leq 1$$

$$F_{y}(y) = \frac{2 \theta \pi}{1} \quad \text{If } \{0 < y < 1\} = 2 \text{ by } 11 \{0 < y < 1\}$$

$$F_{y}(y) = \frac{1}{\theta} \quad \text{Onimate } 0$$
